SOURCE RATINGS

Approved For Release 2000/05/15 : CIA-RDP79T01098A000600080004-9

For each source, the source rating is determined by the number of collection programs in which the source has been used. If the source has been used in more than one collection program, the source rating is determined by the number of collection programs in which the source has been used. If the source has been used in only one collection program, the source rating is determined by the number of collection programs in which the source has been used. If the source has been used in only one collection program, the source rating is determined by the number of collection programs in which the source has been used.

If a single publication treats more than one geographic area and/or topical category and the source mix for each varied then additional forms must be submitted; e.g. India - economics - State and Japan - economics - FIR's.

Rating categories are distributed as follows:

Key - Information from a particular collection program was of such importance that basic conclusions of the finished intelligence item could not have been reached without it.

Supplemental - Information from a particular collection program was important but not essential to basic conclusions of the finished intelligence item.

Incidental - Information from a particular collection program was useful or interesting primarily as background but was used only incidentally in the finished intelligence item.
